CORRECTION

In the article, "Prairie burning violates EPA air quality standards" the air quality in Manhattan was wrongly identified as having violated the EPA federal standards in the past. In the same paragraph, ozone is incorrectly identified as a harmful chemical. In the same article, the outline for the photo inaccurately states that the EPA is investigating the air quality in Manhattan due to the large quantity of controlled burns around the area. The Collegian regrets the errors.

MONEY MATTERS

Five ways for students to improve financial literacy

Andy Rao

Financial literacy, or a lack thereof, is an issue that many people around the nation and world face. As the world economy continues the current rollercoaster of ups and downs, staying financially literate can make or break monetary success.

"The National Financial Educators Council defines someone who is financially literate as one who possesses "the skills and knowledge on financial matters to confidently take effective action that best fulfills an individual's personal, family and global community goals."

According to the National Foundation for Credit Counseling's 2011 Consumer Financial Literacy Report, however, financial literacy is on the decline. In fact, only 57 percent of survey respondents gave themselves an A or a B when describing their knowledge of personal finance.

While many of us students may not experience some of the more complex financial situations, it is always important to be aware of how the world of money works.

Here are five ways to improve your financial literacy:

- 1. Read as much as you can handle**
Students today have access to a wealth of resources that they can utilize to further their financial knowledge. In addition to reading financial publications such as Forbes Magazine or the Wall Street Journal, students can also consult online resources to help expose themselves to current events.
Reading about companies' business strategies, the latest happenings in the stock market and even the biographies of the most successful business leaders in the world can introduce fundamental concepts that can lead students to a deeper understanding of how to handle their own finances.
- 2. Don't be afraid to ask questions**
Not all information is straightforward and easy to understand. That's why asking questions is perhaps one of the most vital aspects of improving your financial literacy.

- 3. Find a mentor**
Often times, a mentor can be your go-to person for help in answering questions or giving advice on finance-related issues. Although a select few students may be able to afford hiring a financial adviser, most of us will have to resort to free advice.
You may be surprised to find, however, that many professionals and even professors are more than willing to answer questions and lend a helping hand. Staying after class and picking your professors' brains, or even just walking into a bank or an investment firm for an informational session may lead to answers you never even imagined you could extract from people.
- 4. Familiarize yourself with the terms**
Having even a basic knowledge of the everyday terms can help you not only understand the often complicated vocabulary that is associated with the finance field, but it can also help you converse with peers and mentors.
Sooner or later, we are going to be thrust out into the real world where credit card companies, mortgage firms and banks are going to expect customers to understand these types of terms when doing things like opening accounts or taking out loans. Students might as well start to learn them now because, like they say, you can't teach an old dog new tricks.
- 5. Take responsibility for your own finances**
Although many students may not yet be completely financially independent, it would be in the best interest of many K-Staters to start learning how to take care of their own finances. This could include things like paying your own bills, creating a budget or even opening new accounts.
By taking on real world responsibilities, students who have never even heard of terms such as "annual percentage rate" or "certificate of deposit," will soon have enough experience to have basic knowledge of financial topics. When learning the language of finance, immersion may prove to be the best technique.

Andy Rao is a sophomore in finance and accounting. Please send comments to news@kstatecollegian.com.

Entrepreneurship fastest growing major, provides job opportunities

Center for the Advancement of Entrepreneurship guides young business leaders, offers start-up assistance

Bretton Ater
contributing writer

Editor's Note: This article was completed as an assignment for a class in the A.Q. Miller School of Journalism and Mass Communications.

Being prepared for life after college is what many students at K-State are striving for. In this day and age, it is starting to become a necessity to be innovative and determined.

All are aspiring for a promising future, and since 2008 there has been a program on campus that provides students an opportunity to develop their creative business minds.

The Center for the Advancement of Entrepreneurship is fairly new to campus, and according to the Center's website, entrepreneurship is currently rated as the fastest growing major at K-State.

The program is open to any

and every student on campus, not just business students. The Center's faculty work to not only educate future entrepreneurs but also to provide them with opportunities on campus to use that knowledge no matter what field their entrepreneurial endeavors may land them in, said Jeff Hornsby, director of the Center for the Advancement of Entrepreneurship.

"We encourage students with good ideas to go for it, with proper assistance of course," Hornsby said.

Wildcats outplayed on offense by Wichita State, lose 10-3

Caleb Wallingford, freshman pitcher, throws the ball during the Northern Colorado game on April 18 at Tointon Family Stadium. The Wildcats won the game 7-5, but fell to the Wichita State Shockers 10-3 in Tuesday's game.

Sean Frye
staff writer

Despite being within one run of the Wichita State Shockers Tuesday night, the K-State Wildcats were routed by the Shockers 10-3. The Shockers put up a combined six runs in the sixth and seventh innings, leaving the Wildcats too much of a deficit to recover from. Junior pitcher TJ McGreevy earned the win for the Shockers in Wichita's Eck Stadium while sophomore Jared Moore was credited with the loss for the Wildcats. The Shockers are now 29-20 overall, while the Wildcats fell to 19-28.

Sophomore center fielder Jared King had an impressive day at the plate, getting three hits in four at-bats and accounting for an RBI. Senior shortstop Jake Brown and junior right fielder Tanner Witt each went 2-for-3 on the night as well.

However, the Shockers' offensive attack simply outdueled the Wildcats all night. Junior first baseman Johnny Coy went 5-for-5 on the day with three RBIs, and sophomore left fielder Micah Green accounted for three more hits and two RBIs.

A K-State player tags a Northern Colorado player out during their game at Tointon Family Stadium on April 18.

The Shockers grabbed a 4-0 lead after scoring two runs in the second and third innings. However, the Wildcats began to claw themselves

back into the game with a RBI-single in the fourth inning by infielder junior Jon Davis, followed by a sacrifice-fly by freshman infielder

Austin Fisher and a RBI-single by King in the fifth inning, putting the score at 4-3.

After pulling within one run, the

Wildcats were given the kill shot in the bottom of the sixth inning, where the Shockers poured in four runs. In the inning, the Shockers got five consecutive batters on base, four of them off hits. Coy also lined a double to left field that scored two runs.

Mistakes then plagued the Wildcats in the bottom of the seventh, where freshman pitcher Robert Youngdahl balked home what was the second of two runs in the inning for the Shockers, putting the score at 10-3, where it would stay for the remainder of the game.

The Shockers' win over the Wildcats marks the second one of the year over their in-state rivals. The first came on April 24 in Manhattan, where the two teams went 15 innings before the Shockers won 9-7.

The Wildcats come home to Manhattan on Friday for a three-game weekend series with the Nebraska-Omaha Mavericks. The Mavericks have struggled mightily this season, only pulling in 12 wins compared to 32 losses.

For the Shockers, they travel to Terre Haute, Ind. for a three-game series with the Indiana State Sycamores starting on Friday.

WOMEN'S GOLF

K-State wraps up season in Lawrence, seven players to return

Corbin McGuire
staff writer

The K-State women's golf team wrapped up their season Sunday after finishing in eighth place at the 2012 Big 12 Conference Championships that was played at the par 70, 6,150-yard Lawrence Country Club in Lawrence.

Oklahoma came away with its second Big 12 Championship with a collective score of 64-over-par 904.

Junior Hanna Roos high-

lighted the Wildcats' final tournament of the season when she improved eight strokes from the second round to the third round to record a 1-over-par 71. That improvement boosted Roos to finish in 15th place, her second top-20 finish of the season, the highest placing by a Wildcat in the Big 12 Championship since Elise Houtz in 2009.

"Hanna had a great round today," head coach Kristi Knight said after the tournament was finished. "We got better each

day. Today was a long day with the delay in the middle of the round, but we made positive strides this season. The ladies will continue to practice and improve in the off-season."

Roos and the rest of the Wildcats recorded their best collective score of the weekend on Sunday at 20-over-par 300 to finish with a 54-hole score of 92-over-par 932.

The Wildcats finished eight strokes behind the Texas Tech Red Raiders and 11 strokes behind the Texas A&M Aggies.

Junior Whitney Pyle, the only other Wildcat in the top-20, shot an 8-over-par 78 on the final round to finish in a tie for 20th for her fifth top-20 finish of the season. Freshman Carly Ragains came in three shots behind Pyle after improving two shots from her second round to her final round to finish in a tie for 23rd at 23-over-par 233.

Despite finishing in a tie for 44th, sophomore Gianna Misenhelter notched the best improvement by a Wildcat by

cutting nine strokes off her second-round score in her final round of 5-over-par 75. Senior Ami Storey, in her final tournament as a Wildcat, finished right with Misenhelter in a tie for 44th shooting three rounds of 82, 80 and 83 respectively.

K-State will return seven players from this year's team, including four, Kristen Dorsey, Laura Hildebrandt, Pyle and Roos, who will be seniors next season. Senior Paige Osterloo is the only player the Wildcats will be without next season.

Oklahoma finished with a comfortable seven-stroke lead over the second place Texas Longhorns, who finished just a stroke ahead of the third-place Baylor Bears.

Mary Michael Maggio out of Texas A&M took home the individual honors after shooting three round scores of 77, 73 and 69 to finish with a total 9-over-par 219. Chirapat Jao Javanil from Oklahoma and Hayley Davis out of Baylor finished in a tie for second, just one stroke behind Maggio.

Two-minute drill

Corbin McGuire
staff writer

NBA

Amare Stoudemire, star power forward for the New York Knicks, cut his hand in an unclear incident following the Knicks second game against the Miami Heat on Monday.

Ian Begley wrote in a story on ESPNNewYork.com that "Stoudemire punched a glass casing surrounding a fire extinguisher minutes after the New York Knicks' loss to the Miami Heat, according to a team source. The Knicks power forward suffered lacerations on his left hand which required stitches."

The Knicks lost 104-94 to go down 2-0 thus far in the seven-game series.

"I am so mad at myself right now, I want to apologize to the fans and my team, not proud of my actions, headed home for a new start," Stoudemire wrote on Twitter about two hours

after the game.

Begley wrote that, according to a league source, Stoudemire will most likely miss game 3 of the series with the possibility of being out the rest of the series.

MLB

Delmon Young received a seven-day suspension without pay from Major League Baseball on Monday following his arrest for a hate crime harassment charge he received last week in New York.

"Those associated with our game should meet the responsibilities and standards that stem from our game's stature as a social institution," commissioner Bud Selig said in a statement. "An incident like this cannot and will not be tolerated. I understand that Mr. Young is regretful, and it is my expectation that he will learn from this unfortunate episode."

Young will lose approximately \$257,240 of his \$6,725,000 salary and he will

be eligible for reinstatement from the restricted list on May 4.

NFL

The St. Louis Rams are making steps toward improving their stadium, the Edward Jones Dome, in hopes of making sure the team stays in St. Louis long-term.

The Rams, refusing to release the details, submitted its counterproposal to the St. Louis Convention and Visitors Commission on Tuesday.

The Rams can legally separate from its 30-year lease after the 2014 season if the dome is not considered to be among the best NFL stadiums.

The original CVC plan included \$124 million worth of improvements that included a massive scoreboard, new club seats, windows to add natural light and a 50,000-square-foot attachment for electronic experts and fantasy football players.

MEN'S GOLF

Wildcats place ninth overall

Cory Hostetler
staff writer

The men's golf team wrapped up its season last weekend at the Big 12 Conference Championships, held at the Whispering Pines Golf Club in Trinity, Texas. The Wildcats carded a total score of 75-over-par 1,227 to finish in ninth place overall.

K-State stayed mostly consistent with its team scores over the tournament's four rounds, carding totals of 307, 304, 307 and 309. The team par for each round was set at 288 on the par-72 course.

"We didn't do our best this weekend," said head coach Tim Norris. "We had a few nice rounds, but we struggled in spots as well."

Texas A&M, ranked 15th nationally, took home its first-ever Big 12 Championship title with a 13-over-par 1,165 score for the tournament.

The Aggies held off the nation's top-ranked team, Texas, which was just three strokes behind at 16-over-par 1,168.

Junior team captain Curtis Yonke, who was the top overall performer for the Wildcats on the season, led the way once again for K-State with a score of 18-over-par 306 to finish in a tie for 31st overall.

Junior Ben Juffer and freshman Kyle Weldon each finished two strokes behind Yonke with twin scores of 20-over-par 308, tying for 36th place. Juffer carded a 3-over-par 75 in Sunday's final round, while Weldon shot a 10-over-par 82.

Kyle Smell, the lone senior on the team, finished his collegiate career with a 72-hole score of 23-over-par 311 to tie for 40th overall. His final round score on Sunday of 2-over-par 74 was the highest individual score in a round for any Wildcat over the week-

end. David Klaudt rounded out the scoring for K-State with a tally of 30-over-par 318 for the weekend to tie for 45th overall.

"The course was very tough," Norris said. "The wind was gusting in a few spots, and not executing correctly led to some bogeys for us."

Baylor's Joakim Mikkelsen came away with the Big 12 individual championship with a total score of 3-under-par 285. His final round score of 4-under-par 68 enabled him to climb six spots on the leaderboard and finish just two strokes ahead of Texas A&M's Tyler Dunlap to come away with the individual title.

As the season comes to a close, the Wildcats lose just one senior in Smell. The team will look to improve next year with a roster that includes four players who competed in at least nine tournaments.

Reduce, reuse, recycle

RIGHT:“Every day, 1 U.S. American generates 4.5 lbs of trash,” reads a stack of tires placed before a display in front of Hale Library on Monday to raise awareness about recycling.

ABOVE: Students walk behind a display in front of Hale Library on Monday. The giant constructed scene was made to raise awareness of the huge amount of trash generated by Americans and to encourage students to recycle.

GTAS | Transition ‘overwhelming’

Continued from page 1

According to Miller, however, GTAs are held to high standard, just as the professors are.

“If we are not up to par, we’re out,” he said. “In my opinion, being an expert in your field does not necessarily mean you’ll be a great teacher.”

Miller said he gained a lot of experience from taking on the role of a GTA and said the transition from being a student to becoming a teacher was overwhelming at first.

“I remember my first day. When the bell rang, I had 25 students staring at me, waiting for me to start teaching,” Miller said. “I was basically a deer in headlights because in that moment I realized that everything that happens in this classroom is on me.”

After he realized that his students’ success depended on how well he instructed and engaged them, Miller said he was initially intimidated. He also said it often caught him off guard when he would see his students waiting tables at a restaurant in Aggieville.

“They try to give me free appetizers for grades, but I’m going to need at least a free meal to go with it,” he said, jokingly.

Miller also gave some perspective for those students who look down upon GTAs.

“I learned a lot as a GTA. I learned that the professors and instructors of this university work much harder than students think,” he said. “It’s a constant battle trying to create lesson plans that are both fun and innovative enough to keep the interest of the students.”

NASA utilizes K-State students, faculty for research projects

Anton Trafimovich
staff writer

NASA is planning a manned mission to Mars by the 2030s, but preparation for this long-term discovery has already begun. Members of the K-State kinesiology and electrical engineering departments are participating in several research projects that need to be done for this Mars mission to take place.

Six faculty members are on the current project, one of whom is Bill Kuhn, professor of electrical and computer engineering. Kuhn has gotten a chance to work for NASA before when he participated in another program from 2004-2007.

"My interest originated where most people who are my age's interest in space originated," Kuhn said. "We grew up during the time when NASA was sending people to the moon. Sometimes people say it shaped a generation, because it inspired young people to see science as a pioneering effort."

In the 2004-2007 research project, Kuhn was working on shrinking bulky radios, which could be used on Mars Exploration Rovers. By the end of the project, his team managed to decrease the size of the radio 100 times and its battery consumption 10 times.

Although that project didn't specifically include creating an actual product, the proof of concept was completed. It means the research was on its way to becoming a real radio station on the board of an off-planet mission.

Last fall, K-State received a new grant from NASA. Part of the new grant will be spent on further development of the previous radio completed in the 2004-2007 projects. Researchers now get a chance to push the technology readiness level of the radio forward. Once it

photo courtesy of Steven Warren

Astronaut **Stephen Bowen** poses with K-State students involved in the NASA Mars mission research project.

is completed, K-State can propose its product to aerospace companies to use this smaller-sized radio on any off-planet missions.

"The ideal thing would be that these projects can produce a product which can go out into a company and be sold, and get people jobs and grow the high-tech business in Kansas," Kuhn said.

Apart from Kuhn's radio development project, there are kinesiology and biomedical research projects for NASA going on in K-State. Steven Warren, associate professor of electrical and computer engineering, works closely

with Thomas Barstow, professor of kinesiology, on this NASA project, partially funded by the Office of Experimental Program to Stimulate Competitive Research, as well as a separate effort funded through the NASA Human Research Program at Johnson Space Center. While Barstow develops tests to measure astronauts' levels of conditioning when in space, Warren is engaged in creating wearable medical sensors and algorithms to interpret that data.

"I think it is important to note that NASA is starting to see K-State has a lot to offer in fundamental re-

search and engineering areas that relate to NASA missions," Warren said.

Both Barstow and Warren do other NASA research projects. Warren and his students have been involved in developing wearable biomedical devices that benefit from low power wireless transmission. Batteries, said Warren, are an issue in space work, as there are no plugs to recharge any of the devices.

"Our extended team will need to rely on ways to harvest energy or minimize energy use," he said.

Meanwhile, in his laboratory,

Barstow came up with a unique test that allows astronauts to reduce the number of exercises needed to measure their conditioning. It's hard to condense all the different types of fitness characteristics in one or two tests, but the Barstow team has developed techniques that glean a lot of information.

"They [NASA] told us there is no other laboratory in the country, no other school, that's collecting the kind of data that we are collecting. In that sense K-State and our project are unique," Barstow said.

When a human being goes to space, virtually every part of the body deteriorates. This is the reason why Barstow's students also work on defining the minimum level of conditioning necessary to perform tasks in space.

"So then when we go to a destination, the astronauts are not going to be a ball of jelly and not be able to go out and to perform their tasks," Barstow said.

As for students, they are involved in all of NASA research done at K-State. Not only doctoral and master's students, but also a lot of undergraduates work in labs, conducting calculations, with results which could be used in future space missions.

"Students love it," Kuhn said. "They know that they are doing something very cutting edge, very important. Any of those students whom I've seen working on either projects are very excited about working on NASA."

Such research also stimulates the outreach of the engineering profession.

"That's going to help with getting the excitement of engineering more visible at lower levels," Kuhn said. "The world and the U.S. need more people interested in science and mathematics."

Student proposes on pirate ship, carries over theme to wedding

Photo courtesy of Christy Segura

Kelsey Castanon
managing editor

Cheers erupted and cannonballs fired one sunny evening in South Padre, Texas, as Mason Good-Turney announced the success of his wedding proposal to fiancée Valerie Rock. What started out as a pirate ship adventure ended in the proposal of a lifetime.

Such an adventure is one that Rock, junior in advertising and broadcast media, and Good-Turney, senior in social sciences, will remember for the rest of their lives.

Picking such a location for a marriage proposal may seem outlandish for some, but not for this funny duo. Hilarity is the couple's forte.

"We're just eccentric people," Rock said, laughing as Good-Turney nodded in agreement.

"We both really love movies and theater. We're just 'out there' kind of people. I like to call us 'fun' people."

Their relationship roots go back to K-State. The two talked briefly during the first week of classes and they worked together at Van Zile Hall - where Good-Turney took note of Rock's striking last name, but the couple really became close when performing together in K-State's improvisational group, On the Spot.

"Our friendship grew from there," Good-Turney said, adding that he was a bit hesitant to ask her out at first because he didn't want to ruin anything between them.

"Finally, I was watching an episode of 'The Big Bang Theory' where they talk about Shrodinger's cat in the box with the pile of poison," he said. "You don't know if the cat is alive or dead until you open the box. So I was like, 'why

not?' and I did. And it's been awesome."

Summer 2011 came after six months of dating, and Rock was headed to Camp War Eagle in Arkansas. The distance proved to be a challenge for the couple, but was made easier through social media sites like Twitter. The time apart also brought Good-Turney to the realization that he wanted Rock to be in his life forever.

After she came back from camp, Good-Turney and Rock planned a trip to the beach of South Padre to make up for lost time together. She had no idea at the time that the trip would throw some surprises her way.

"I was trying to think of when the perfect time would be to [propose]," Good-Turney said. "And then I remembered we were taking this sweet pirate cruise. We

Children's book teaches lessons for all ages, sequel falls short

"The Gammage Cup"

★★★★★

"Whisper of Glocken"

★★★☆☆

Book reviews by Karen Ingram

"The Gammage Cup" was one of my favorite books when I was a child, but enough years had gone by that the details had faded, so I recently decided to read it again. It was better than I remembered, not only because I refreshed my memory about the colorful characters and action, but also because I had more insight, as an adult, into the social commentary author Carol Kendall put in her book.

"The Gammage Cup" takes place in a small village in The Land Between the Mountains where the Minnips have lived safely and happily for hundreds of years after seeking refuge from an unspecified calamity that destroyed the world outside. This particular village goes through a rough spot when five rebels - who do such ghastly things as paint their doors red or wear colorful clothes - are exiled in an effort to restore order. These rebels discover strange beings known as "Mushrooms" are tunneling into the valley from outside of the mountain range and plan to invade and destroy the Minnip society. They must race against time and prejudice to warn the villagers and stop the invasion.

The book was first published in 1959 and criticizes the conformity of late '50s/early '60s America. The village

is composed of houses that all look the same, much like the cookie-cutter houses springing up in suburbs all across the country. The book also celebrates nonconformity and encourages people to think for themselves. The five rebellious heroes have done nothing wrong to be banished from the village, they're just different; poets, painters and thinkers, instead of blindly believing what the leaders tell them.

The book also touches upon the subject of global warfare. It's never specified that the Minnips sought refuge in The Land Between the Mountains because of a nuclear war, but there are hints to suggest that this is what happened, and that the Minnips and "Mushrooms" were once simply people. It's amusing to see them puzzle over artifacts from the outside world and come up with plausible (but wrong) explanations for them. You'll get a kick out of the various interpretations of "Mary Had a Little Lamb."

"The Gammage Cup" teaches you to be true to yourself, and that it's OK to be different. I give "The Gammage Cup" five out of five stars. It's a true classic and it will uplift you.

Proof that sequels are rarely as good as the originals, "The Whisper of Glocken" delivers a lackluster performance compared to the first book, "The Gammage Cup." The new characters Kendall introduces are not as well-fleshed-out as the original characters in "Gammage," creatures are introduced that do not fit the history introduced in the first book, there are plot twists that make

no sense and the ending is, at best, ambiguous.

Published six years after "The Gammage Cup," the story reads fast and rough, as though it were thrown together in a hurry and had a limited number of pages allowed by the publisher. The story follows five new heroes who venture outside of The Land Between the Mountains to save the Minnips from a devastating flood. Here's the first problem: Why five new heroes? The events in the book take place five years after "Gammage" so the original characters are not too old for such an adventure. No good explanation is given.

Once the new heroes are outside of the valley, they run into a host of otherworldly creatures, such as man-eating plants and giants, that make the book feel more like fantasy whereas the first book was more plausible. Also, they never encounter the villainous "Mushrooms" from the first book. What happened to them?

Per my personal rule against spoilers, I won't disclose the ending, but I will say that while one threat is eliminated, another (much larger) one is simply left without resolution. Muh?

While entertaining, "The Whisper of Glocken" lacks the depth, plot, morality lessons and sense of conclusion found in "The Gammage Cup." By itself, it's not bad, but because it's billed as a sequel, it's just disappointing in comparison to the original. Three stars.

Karen Ingram is a junior in English. Please send comments to edge@kstatecollegian.com.

310 Help Wanted

COVAN WORLD-WIDE Moving is looking for college students for summer work. Excellent opportunity to stay in town for summer, stay in shape, and save some money or if you need an internship alternative. CDL drivers, helpers, and packers needed. No CDL required. Apply as soon as possible at 5925 Corporate Dr., Manhattan, KS 66503. Call Chris Hamam with any questions at 785-537-7284. Very competitive \$10-\$12 hourly/ incentive wages. Training starts May 19. Job begins immediately following spring finals week through summer and possible part-time work next semester.

PLAY SPORTS! HAVE FUN! SAVE MONEY! Maine camp needs fun loving counselors to teach all land, adventure, and water sports. Great summer! Call 888-844-8080, apply: campcedar.com.

PART-TIME laborer. Tuesdays and Thursdays. Daytime. \$10-12/hour. More hours if wanted. 785-317-7713.

APPLICATION DEVELOPER. KSU Housing and Dining Services seeks student application developers to work as part of the HDS Web Team. Strongly prefer programming experience in PHP and MySQL, a desire to learn and enjoy a challenge. Preference will be given to undergraduates who are computer science or MIS majors. Undergraduates majoring in other areas with experience in the technologies mentioned are encouraged to apply. Must be able to work a minimum of 30 hours per week between 8a.m.-5p.m., Monday-Friday during the summer and 15 hours per week during the school year. Starts \$10.00/ hour. Work study not required. Becoming a member of the HDS Web Team allows you to use your creativity and knowledge while gaining valuable experience programming web applications used by HDS staff and residents. Housing and Dining Services offers flexible hours within a team environment. Interested applicants should submit their resume and download, fill out the Student Employment Application at http://housing.k-state.edu/employment/StudentEmpApp_Web.pdf and forward to Rob Satterlee at satterl@k-state.edu. AA/EEO.

NEUTRINO | Different ‘flavors’ created

Continued from page 1

According to Kayser, the muon weighs about 200 times as much as the electron and the tau weighs about 3,500 times as much as the electron. They are referred to as electrically charged leptons.

“Associated with each of these charged particles is the neutrino,” Kayser said. “Neutrinos are created in a variety of physical processes. Whether they’re created in nature or in the lab, typically neutrinos are created with one of the charged leptons. As a result of quantum mechanics, they can do amazing things like changing from muon flavor to tau flavor. And it is through that flavor change that we have discovered that they have nonzero masses.”

Vibhore Bhatnagar, freshman in computer science, said he was interested in attending the lecture because he thought it could help him assess his enthusiasm for the subject.

“I’m taking a couple of physics courses so it seemed really interesting,” he said. “I just wanted to see what it all was about. Because it’s not really my major, I’m just here to gauge my interest in the area and get a deeper understanding.”

Michelle Martinez and Heather Smith, both sophomores in psychology, agreed that the lecture was clear and concise for those not so familiar with the subject of physics.

“I thought it was going to be a little hard to understand at first, but I did like how he gave a lot of examples and we got to see visuals to help us grasp the topic,” Smith said.

Martinez agreed, saying that although she was slightly intimidated by the subject matter at first, she picked up the content quickly after Kayser started speaking.

“He explained everything really well,” Martinez said. “At first it was really daunting, but he made it pretty straightforward for people who aren’t physics savvy and I wasn’t expecting that.”

BUSINESS | Venture accelerators offer space, resources

Mark Haynes, graduate student in industrial engineering, welds the Z axis of his company’s third printer in his garage on April 11.

Continued from page 3

there are many reasons that someone may be offered a job, and pursuing entrepreneurship is a great way to ensure a well-balanced education, said Jerrod Reddick, junior in finance and accounting.

“Students in this major want to try something different ... they can gain knowledge from all perspectives,” Reddick said.

According to Reddick, the current generation of college students has seen a handful of younger entrepreneurs become very successful, which is what could account for the spike in the numbers pursuing a degree in entrepreneurship.

The program also offers more than the networking and the education; there are actually offices on campus that will house student entrepreneurs.

Perhaps the most important part of what the Center has provided students is the Venture Accelerator, university housing that is offered to students as office space and headquarters for a start-up business. The two offices are located at 914 N. Manhattan Ave.

Entrepreneurs who are on the verge of starting their own business make good use of the Center. The accelerator provides a student business incubator,

which features conference rooms, large office space, venture funds and mentor resources.

Students who have successfully completed an application consisting of a business plan can use the resources that are offered.

“[Students] can get access to the incubator that will house them and provide resources to assist in the launch of the business,” Hornsby said.

Entrepreneurship, as with all walks of life, needs passion to thrive, Hornsby said. He also said that even with all of the resources and utilities provided to the students, the desire to learn and improve must exist for the program to survive.

“The most rewarding thing is observing the passion students have as they engage in the planning process to launch a venture,” Hornsby said.

Hornsby also said that at K-State, the students receive the necessary education on how to operate a business and also how to come up with business ideas and plans.

The educational opportunities that are provided, he said, are not limited to the classroom.

“The critical thing is to build a strong network of support people for funding, knowledge and emotional support,” Hornsby said.

Steven Coen, senior

in finance and entrepreneurship, said that networking is important in any field, but is especially important for those looking to start their own business.

“Teachers, students, other K-State employees and countless other individuals connected with me through various ways without the need of an established club or organization,” Coen said.

Despite emphasizing the importance of networking, Coen also said it would not be accurate to say that networking is the only component to start entrepreneurial endeavors.

Both Coen and Reddick said that it is tough to pinpoint which aspect of business is most important, as there are several components of running a business that can play a large part in entrepreneurial success.

“A basic understanding of accounting and the knowledge of where money is coming from and where money is going is monumentally important, especially in this economy,” Reddick said.

Coen agreed, saying that maximizing exposure to customers is also important.

“Accounting is the language of business,” Coen said. “The next most important part is marketing in the form of selling yourself and your business.”

PROPOSAL | ‘He’s my best friend,’ says bride-to-be

Continued from page 6

both enjoy pirates. So I thought it would be cool because of the sunset and the water.”

He added that he was “98 percent sure she would say yes,” meaning he had only a few concerns for his evening proposal. Very few worries concerned the answer to his life-important question.

“What was going through my head was, ‘I hope there’s not a big

wave that washes the ring off of the boat. I hope a seagull doesn’t take it’ - just a bunch of crazy things that could go wrong. But when it came down to it, I just wanted her to like it,” he said.

His plan had worked, and Rock loved the sunset cruise. So much so, that she was determined to get a picture in front of it, despite Good-Turney’s attempt at an introduction to the proposal.

When he got down on one knee, her jaw dropped.

“The rest of the ride back, I was just in utter shock,” Rock said. “I was sure I would marry him, it was just the issue of when. So when he did I was definitely shocked because he had told me all summer he didn’t have enough money to get a ring. Probably because he already bought one.”

Keeping in line with the pirate theme of the proposal, Rock and Good-Turney plan to carry it over to their wedding. Along with a helm wheel placed at the

altar, treasure chest centerpieces will be filled with gold and the bridesmaids and groomsmen will be wearing pirate outfits at the reception.

“The guy that we had wanted to marry us anyway, his last name is Morgan,” Rock said. “So we’ll be having a Captain Morgan marrying us.”

The proposal and wedding theme is merely one reflection of the duo’s personalities and the future will likely hold many more good times.

“He’s my best friend, so it’s going to be like hanging out with my best friend all the time,” she said. “We’re so dorky. I think we both bring out facets in each other’s personalities that make us better.”

Rock and Good-Turney are set to walk the plank together on July 7.
